

Uzair Riasat

Backend Engineer · Python & FastAPI · AI Agents & LLM Systems · ERP

Islamabad, Pakistan · +92 301 8759589 · uzairriasat510@gmail.com · [LinkedIn](#) · [Portfolio](#) · [GitHub](#)

Backend and AI engineer with production experience in Python and FastAPI — shipping APIs, ERP systems, and LLM pipelines at MicroMerger and independently.

Achieved ~30% reduction in API response times through schema restructuring and query optimisation. Built and deployed autonomous AI agents and RAG pipelines using LangGraph and the OpenAI API. Experienced in cross-functional teams coordinated through Trello and Ajera. Full delivery cycle: design, code review, CI/CD, testing, and production.

SKILLS

Backend: Python, FastAPI, REST API Design, ERP Systems, MySQL, API Architecture

AI / LLM: LangGraph, OpenAI API, Anthropic API, AI Agents, RAG Pipelines, Vector Retrieval, Prompt Engineering, GPT-4o

Frontend: React, Next.js, TypeScript, Tailwind CSS

Engineering: Git, Code Review, Unit Testing, CI/CD (GitHub Actions)

Tooling & Deploy: Trello, Jira, Postman, Render, Netlify, GitHub Actions

EXPERIENCE

Software Developer — Backend & AI · MicroMerger

Jan 2025 – Present

- **~30% faster API response times** — restructured MySQL schemas and rewrote query logic, removing the primary bottleneck across ERP and web application endpoints.
- **Shipped production-grade FastAPI services** covering inventory management, order processing, and internal workflows — replacing manual processes with reliable, testable APIs maintained under code review.
- **Automated internal deployment workflows using GitHub Actions**, reducing manual release steps and catching regressions before production across the ERP backend.
- **Coordinated sprints and delivery tracking** across developers, business analysts, and project managers using Trello and Ajera in an Agile environment.

Freelance AI & Backend Developer · Self-directed (alongside BSc studies)

2023 – Dec 2024

- **Built and deployed autonomous AI agents** using LangGraph and the OpenAI API — multi-step reasoning, tool execution, and agentic loops validated on real document and workflow use cases.
- **Eliminated LLM hallucinations in production** by engineering RAG pipelines that ground every LLM response in structured knowledge bases, directly improving factual reliability.
- **Shipped two publicly deployed tools** — a live portfolio AI assistant and a document extraction API — both accessible and operational, not private prototypes.

PROJECTS

Document Processing Agent · FastAPI · LangGraph · OpenAI API · Render · GitHub Actions

2026 [↗ Live](#)

Converts unstructured PDFs/DOCX into validated JSON via an agentic Extractor → Validator → Clarifier loop. GitHub Actions CI/CD pipeline handles deployment and a keep-alive workflow eliminates cold starts — self-initiated, fully operational.

Portfolio AI Assistant · Next.js · TypeScript · OpenAI API · Netlify

2024 [↗ Live](#)

Live AI assistant serving real visitor queries — prompt layer, conversation memory, and frontend built and deployed as one integrated system. Demonstrates clear technical communication: the UI explains its own capabilities to non-technical users.

E-commerce ERP Backend Python · FastAPI · MySQL 2025

Built as a structured learning project to ERP production standards — inventory, orders, and CRM modules with normalised schemas and independently scalable architecture. No shortcuts taken on query design or schema normalisation.

EDUCATION & CERTIFICATIONS

BSc Business & Information Technology · Virtual University of Pakistan 2022 – Present (*Expected 2027*)

Certified Cloud Applied Generative AI Engineer · PIAIC — Presidential Initiative for AI & Computing, Pakistan · 2-year programme in generative AI, cloud, and applied ML 2023 – 2024
